👉 **INFORMATION ABOUT CORRECT GENERATION OF PRINT FILES FOR ROLL-UP DISPLAYS**
The following guidelines are to help you generate a correct print file. Should you be in doubt, please download the corresponding template from our website, consult our FAQ-section, activate the optional file check by an operator or call our service.

❶ FILE FORMAT
Our systems only accept PDF files that have been generated as final 1:1 format (no password protection).

❷ COLOURS
Dependent upon print material, colours can show slight differences. All files should be generated in CMYK mode (Cyan, Magenta, Yellow, Black). You can apply the Fogra 27 colour profile. Files that contain RGB or Pantone colours will be modified by a standardised colour replacement.
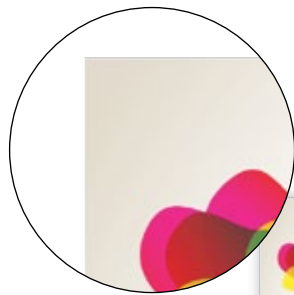

❸ RESOLUTION
The optimum resolution is between 100 and 150dpi.
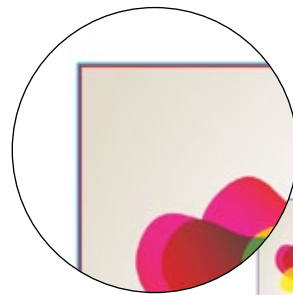

❹ EXTRA INFORMATION
The minimum printable point is 0,5.

❺ MARGINS AND BLEEDS
Please download the corresponding template from our website in order to generate a correct print file for your planned product. Then personalise it with your own graphics and save the file in PDF format to adhere to all guidelines.

correct file   incorrect file

As you can see in the following graphic, the bleed needs to be 1 mm on all sides. Please do not fill in the lower area (20 cm) that in the template is marked with grey, with graphics or text.
This part is not visible as it disappears in the base.

format:
85x200 cm

bleed:
0.1cm
per page

total format:
85.2x220.2cm

Lower area,
height 20cm
**DO NOT place text
or graphics
in this area**
